ENERGY-SAVING TIPS

- Blow fans directly on you to make temperatures feel up to 4° cooler.
- Set your thermostat to 78° when it is hot. Each degree cooler will increase your energy use by 6% to 8%.
- Clean or replace filters for your cooling/heating system at least once a month. Dirty filters will make your system work harder and run longer than necessary.
- Switch to LED bulbs – they are 90% more efficient than incandescent bulbs and can last 10 to 15 years.
- Use window solar screens to block out 60% to 70% of sunlight and heat.
